## Euclid's Window: The Story of Geometry from Parallel Lines to Hyperspace (Paperback)

By Leonard Mlodinow

Penguin Books Ltd, United Kingdom, 2007. Paperback.  
Condition: New. Language: English . Brand New Book. In Euclid's Window, Leonard Mlodinow takes us on a brilliantly entertaining journey through 3,000 years of genius and geometry, introducing the people who revolutionized the way we see the world around us. Ever since Pythagoras hatched a little scheme to invent a set of rules describing the entire universe, scientists and mathematicians have tried to seek order in the cosmos: Euclid, who in 300BC defined the nature of space; Descartes, a fourteenth-century gambler and idler who invented the graph; Gauss, the fifteen-year-old genius who discovered that space is curved; Einstein, who added time to the equation; and Witten, who ushered in today's weird new world of extra, twisted dimensions. They all show how geometry is the key to understanding the universe. Once you have viewed life through Euclid's Window, it will never be the same again. Elegant, attractive and concise . also very readable. Buy it Ian Stewart, New Scientist This is an exhilarating book . an important book . and finally, a lovely book, one that reflects the radiance of its subject David Berlinski Reader-friendly, high-spirited, splendidly lucid and often hilarious...
